                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC subject. Preventing the development, onset or progression of asthma or come or more asthma-like symptoms in a child having or previously having a respiratory infection comprises administering an IL-9 antagonist. CC Preventing, managing, treating or ameliorating wheezing in a pre-term cc infant, infant or child comprises administering an IL-9 antagonist. The method further comprises administering at least one other therapy that is not administration of an IL-9 antagonist. Preventing, managing, treating cc or ameliorating wheezing in a human subject comprises administering an IL-9 antagonist and at least one other therapy that is not administration of an IL-9 antagonist. The therapy is an immunomodulatory agent, an anti-viral agent, an anti-historic, an anti-fugal cadministering to the subject a leukotriene modifier, an anti-histody or a mast cell modulator. The method further comprises administering an IL-9 antagonist and at leukotriene modifier, an anti-histody or a mast cell protease inhibitor. Preventing, managing, treating or ameliorating cadministering an IL-9 antagonist is an anti-IL-4 antibody or a mast cell protease inhibitor. Preventing, managing, treating or ameliorating cadministering an IL-9 antagonist is an anti-body that immunospecifically binds to an IL-9 antagonist is an antibody that immunospecifically binds to an IL-9 receptor (IL-9R) or its symptoms caused by bacteria, fungical corporation from human 4D4 antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes a new IL-9 antibody comprising: a variable heavy CC (VH) or variable light (VL) domain having an amino acid sequence of the CV H or vL domain of 4D4, 4D4 H2-1 D11, 4D4com-XF9, 4D4com-ZF9, 7F3, 71A10, CC 2D3, 7F3com-2H2, 7F3com-3H5 or 7F3com-3D4; or a complementarity CC 4D4 H2-1 D11, 4D4com-XF9, 4D4com-ZF9, 7F3, 71A10, CC 7F3com-3H5 or 7F3com-3D4; or a complementarity CC 4D4 H2-1 D11, 4D4com-XF9, 4D4com-ZF9, 7F3, 7H310, 22D3, 7F3com-2H2, CC 7F3com-3H5 or 7F3com-3D4. The antibody immunospecifically binds to a CC numan IL-9 polypeptide. Also described are: a pharmaceutical composition CC comprising the IL-9 antibody and a carrier; a method for preventing, CC aberrant expression or activity of an II-9 polypeptide or an IL-9R; a CC method of diagnosing, prognosing, or monitoring a disorder characterised by aberrant expression or activity of an IL-9R; a kit comprising the CC antibody and instructions for use, in one or more containers; and an CC antibody and instructions for use, in one or more containers; and an CC pharmaceutical agent comprises the IL-9 antibody and a carrier. The IL-9 antibody is useful in preparing a composition for diagnosing, treating or preventing a disorder container or activity of an IL-9R, e.g., respiratory infection CC antibody is useful in preparing a composition for diagnosing, treating or preventing a disorder such as arbitral and a carrier or activity of an IL-9 polypeptide or an II-9 polypeptide o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC polypepide, IL-9R or one or more subunits, inflammatory disorders such as asthma or an allergy, autroimmune disorders such as diabetes, autoimmune adrenal insufficiency, pure red cell anemia, multiple sclerosis, rheumatoid carditis, systemic lupus crythematosus, rheumatoid arthritis, chronic inflammation. Sjogren's syndrome polymyositis, dermatomyositis or scleroderma, proliferative clisease or an infection (preferably, a respiratory infection). The invention is also useful in gene therapy, chemotherapy and to generate animal disease models. The present sequence is a heavy chain variable (VH) domain complementarity determining region, CDR3 peptide present in human interleukin-9 (IL-9) antibodies 4D4 H2-1 D11, 7F3, 71A10, 7F3 22D3, 7F3com-3H2, 7F3com-3H5 and 7F3com-3D4. Note: The present sequence is the SEQ ID NO: 3 which is given in the sequence listing. This sequence C differs from the SEQ ID NO: 3 shown on table 1 in page 2 (antibody 4D4) in the disclosure of the specification (see AED66959).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The formulation exhibit stability, low to undetectable levels of aggregation and very little to no loss of the biological activities of antibodies and its fragments, even during the long period of storage. The antibody formulation of the invention is useful for preventing, managing, treating or ameliorating a disease or disorder associated with aberrant expression and/or activity of an II-9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antibody formulation comprises antibody or antibody fragment that immunospecifically binds to an IL-9 polypeptide, useful for preventing, managing, treating, or ameliorating, e.g. asthma, allergy, diabetes, or multiple sclerosis.

                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides liquid formulation of antibodies or CC antibody fragments that immunospecifically binds to an interleukin-9 (IL-CC 9) polypeptide. The formulation exhibit stability, low to undetectable CC levels of aggregation and very little to no loss of the biological CC activities of antibodies and its fragments, even during the long period CC of storage. The antibody formulation of the invention is useful for CC preventing, managing, treating or ameliorating a disease or disorder CC protypeptide, IL-9R or one or more subunits, inflammatory disorders such as asthma or an allergy, autoimmune disorders such as diabetes, CC polypeptide, IL-9R or one or more subunits, inflammatory disorders such as asthma or an allergy, autoimmune adrenal insufficiency, pure red cell anemia, multiple sclerosis, rheumatoid carditis, systemic lupus CC erythematosus, rheumatoid arthritis, chronic inflammation, Sjogren's CC esyndrome polymyositis, dermatomyositis, or scleroderma, proliferative CC syndrome polymyositis, dermatomyositis or scleroderma, proliferative CC invention is also useful in gene therapy, chemotherapy and to generate CC unimal disease models. The present sequence is a heavy chain variable CC unimal disease models. The present sequence is a heavy chain variable CC the SEQ ID NO: 3 shown on table 1 in page 2 in disclosure of the sequence listing of the specification (4D4 H2-1 D11, 7F3, 71A10, 7F3 CC 2D3, 7F3com-2H2, 7F3com-3H5 and 7F3com-3D4) (see AED66887).

The RASP-1 polypeptides are involved in regeneration of the liver and are useful in the diagnosis, prognosis and treatment of liver-associated disorders, such as viral infection, autoimmunity, hepatitis or cirrhosis. They can also be used in methods for maintaining cultured cells or tissues, such as hepatocytes cells or tissues, prior to transplantation. In addition, RASP-1, can be used to promote hepatocyte growth in vitro, in order to, e.g. facilitate production of growth factors, such as hepatocyte growth factor (HGF), that are produced by them. The regulatory region of RASP-1 allows tissue-specific expression (i.e. liver) of an operatively linked
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated human regeneration-associated serpin-1 - used to develop products for the diagnosis and treatment of liver conditions, e.g. viral infection, autoimmunity, hepatitis or cirrhosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  fragmentation of a polypeptide or protein; determining a first physico-
c chemical property other than mass or mass to charge ratio of the
molecules comprising peptides; and optionally determining a second,
third, fourth and/or fifth physico-chemical property of the molecules
cc comprising peptides; and a mass spectrometer comprising a mass analyser
cc for accurately determining the mass to charge ratio of the first
cc molecules, and means for identifying the first molecules of the basis of
at least the first physico-chemical property and the accurately
cd determined mass to charge ratio of the first molecules and optionally on
the basis of the second, third, fourth and/or fifth physico-chemical
cc property. The method and spectrometer are useful in protein
dentification, protein quantitation, proteases, high-resolution mass
spectrometry, proteomics, genomics and bioinformatics. This sequence
represents a peptide from an indexed peptide database created by the
created and spectrometry method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The epitope is admixed or joined to a CTL or HTL epitope. The epitope is bound to an HLA molecule on the antigen-presenting cell, where when an A2 restricted cytotoxic lymphocyte (CTL) is present, a receptor of the CTL binds to a complex of the HLA molecule and the epitope. Specifically claimed are peptides having allele-specific binding motifs for HLA. The compositions and methods are useful for preventing, treating or diagnosing viral diseases and cancer. The peptide epitopes are useful as diagnostic agents for evaluating immune responses, for making antibodies and for evaluating efficacy of a vaccine. Sequences given in ADW29251-ADW37745 represent epitopes of the invention as given in Tables 2-31.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Virucide; cytostatic; gene therapy; vaccine; epitope; cytotoxic T cell; MHC class I; CTL; HTL; A2-restricted cytotoxic lymphocyte; HLA; viral disease; cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    from 30 lists given in the specification. Also disclosed is a method for inducing a cytotoxic T cell response against a pre-selected antigen in a patient expressing a specific MHC class I allele by contacting cytotoxic T cells from the patient with the composition cited above. The patient composition comprises an epitope that is joined by an amino acid linker. C composition comprises an epitope that is joined by an amino acid linker. The epitope is admixed or joined to a CTL or HTL epitope. The epitope is bound to an HLA molecule on the antigen-presenting cell, where when an A2 restricted cytotoxic lymphocyte (CTL) is present, a receptor of the CTL binds to a complex of the HLA molecule and the epitope. Specifically claimed are peptides having allele-specific binding motifs for HLA. The compositions and methods are useful for preventing, treating or diagnostic agents for evaluating immune responses, for making antibodies and for evaluating efficacy of a vaccine. Sequences given in ADM29251-ADM37745 represent epitopes of the invention as given in Tables 2-31.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                           protein and are represented by the hydrophilicity maxima of the protein. These peptides are enriched in charged amino acids arranged with neutral spacer amino acids. The specific signal character of these oligopeptides is determined by a characteristic combination of conformation and charge within the signal sequence. These oligopeptides may be used as vaccines in the treatment of human disease, as competitive inhibitors to prevent or reduce the metabolic action or interaction of a selected protein by blocking its specific signal sequences, or as therapeutic agents to function as feedback regulators to reduce synthesis rate of a selected protein. These peptides may be modified by omitting one or more amino acids at the N- and/or C-terminal, by substituting one or more amino acids without consideration of charge and polarity, by substituting one or more amino acids without consideration acids residues with similar charge and/or cormore amino acids with amino acid residues with similar charge and/or cormore amino acids with amino acid residues with similar charge and/or cormore amino acids at the N- and/or charge and polarity, by substituting one or more amino acids with amino acid residues with similar charge and/or charge and/or charge and/or charge and polarity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying signal oligopeptide(s) in protein sequence(s) - shown as regions of max. hydrophilicity, used in modulating communication bety protein(s).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequences given in AAW21201-560 represent hydrophilic signal oligopeptides. These signal oligopeptides are localised on the surface of the protein and are represented by the hydrophilicity maxima of the protein. These peptides are enriched in charged amino acids arranged with neutral spacer amino acids. The specific signal character of these oligopeptides is determined by a characteristic combination of conformation and charge within the signal sequence. These oligopeptides may be used as vaccines in the treatment of human disease, as competitive inhibitors to prevent or reduce the metabolic action or interaction of a selected protein by blocking its specific signal sequences, or as therapeutic agents to blocking its specific signal sequences, or as therapeutic agents to function as feedback regulators to reduce synthesis rate of a selected protein. These peptides may be modified by omitting one or more amino acids at the N- and/or C-terminal, by substituting one or more amino acids without consideration of charge and polarity, by substituting one or more amino acids with amino acid residues with similar charge and/or polarity, by omitting one or more amino acids with amino acid residues with similar charge and/or polarity, by omitting one or more amino acids or a combination of these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hydroxymethylglutaryl coenzyme A reductase; glučagon precursor; rhesus; gonadoliberin precursor; plasminogen activator inhibitor 2; prorenin; Alzheimer amyloid A4; corticotropin releasing factor binding protein; apolipoprotein E; herpes virus 1 glycoprotein B; HSV1; human; OMVVS; herpes virus 2 glycoprotein B; HSV2; collagenase; apolipoprotein A; Treponema pallidum membrane protein; TMPA; islet amyloid polypeptide; fibroblast MMP1; schistosoma elastase precursor; schistosomin; hepatitis delta antigen; rev protein; HIV; VIIV; angiotensinogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hydrophilic; signal oligopeptide; hydrophilicity maxima; vaccine; SIV; competitive inhibitor; feedback regulator; synthesis; gastrin precursor; charge; polarity; farnesyl synthetase; plasminogen activator inhibitor 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Glucagon precursor derived signal oligopeptide #18.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAW21313 standard; peptide; 13 AA
Identifying signal oligopeptide(s) in protein sequence(s) - shown as regions of max. hydrophilicity, used in modulating communication bet
                                                                                                                                                                                                                                                                                                                                14-JAN-1994;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequences given in AAW21201-560 represent hydrophilic signal oligocopeptides. These signal oligopeptides are localised on the surface of the protein and are represented by the hydrophilicity maxima of the protein. These peptides are enriched in charged amino acids arranged with neutral spacer amino acids. The specific signal character of these oligopeptides components of the stoppeptides of the protein and charge within the signal sequence. These oligopeptides may be used as vaccines in the treatment of human disease, as competitive inhibitors to prevent or reduce the metabolic action or interaction of a selected protein by blocking its specific signal sequences, or as therapeutic agents to blocking its specific signal sequences, or as therapeutic agents to protein. These peptides may be modified by omitting one or more amino acids without consideration of charge and polarity, by substituting one or more amino acids without consideration acids residues with similar charge and/or components of the protein acids with amino acid residues with similar charge and/or components of the protein similar charge of the prot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

commented nutriner compities administering at leukoritem modifier, which is come thod of preventing the development, onset or progression of asthma or come or more asthma-like symptoms in a child, a method of preventing, comanging, treating or ameliorating wheezing in a pre-term infant, infant or child, a method of preventing, managing, treating or ameliorating wheezing in a pre-term infant, infant cor child, a method of preventing, managing, treating or ameliorating wheezing in a pre-term infant, infant or child, a method of preventing, managing, treating or ameliorating the development, onset or progression of asthma or one or more asthma-like symptoms in a child having or previously having a respiratory infection comprises administering an IL-9 antagonist.

Creptaratory infection comprises administering an IL-9 antagonist. The method further comprises administering an IL-9 antagonist. The inflammatory agent, an anti-viral agent, an anti-orating managing, treating or ameliorating wheezing in a human subject comprises administration of an IL-9 antagonist. The therapy that is not administration of an IL-9 antagonist. Preventing, managing, treating or ameliorating wheezing in a human subject comprises administration of an IL-9 antagonist. The therapy is an immunomodulatory agent, an anti-viral agent, an anti-block, an anti-histamine, an anti-block, an anti-histamine, and anti-
The invention relates to a method of managing, treating or ameliorating a respiratory infection or its symptom in a human subject by administering an interleukin-9 (IL-9) antagonist. The method further comprises administering to the subject an anti-respiratory syncytial virus (anti-RSV) antigen antibody. The anti-RSV antigen antibody is palivizumab. The method further comprises administering a leukotriene modifier, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Managing, treating or ameliorating in a human subject a respiratory infection or its symptoms caused by bacteria, fungi or respiratory syncytial virus by administering an IL-9 antagonist.

New IL-9 antibody comprising a variable heavy or light domain or a complementarity determining region having an amino acid sequence of e.g., 401, useful in treating or preventing e.g., respiratory infection or inflammatory disorder.

Disclosure; SEQ ID NO 12; 291pp; English.

The invention describes a new IL-9 antibody comprising: a variable heavy CC (VH) or variable light (VL) domain having an amino acid sequence of the CC (VH) or variable light (VL) domain having an amino acid sequence of the CC (VH) or vL domain of 4D4, 4D4 H2-1 D11, 4D4com-2F9, 7F3, 71A10, CC 2D3, 7F3com-2H2, 7F3com-3H5 or 7F3com-3D4; or a complementarity CC determining region (CDR) having an amino acid sequence of a CDR of 4D4, 4D4 H2-1 D11, 4D4com-2F9, 7F3, 7H310, 22D3, 7F3com-2H2, CC 7F3com-3H5 or 7

T-cell antigen receptor VJ junction beta chain - human
C:Species: Homo sapiens (man)
C:Date: 06-Jan-1995 #sequence_revision 06-Jan-1995 #text_change 05-Nov-1999
C:Accession: S47373
R;Lehner, P.J.
Submitted to the EMBL Data Library, August 1994
A;Description: Human HLA-A0201 restricted recognition of influenza A is dominated by T c
A;Reference number: S47373
A;Accession: S47373
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-13 <LEH>

-I- SUBCELLULAR LOCATION: Secreted protein.
-I- TISSUE SPECIFICITY: Expressed by the skin glands.
-I- SIMILARITY: Belongs to the frog skin active peptide (FSAP) Brevinin subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Euglenozoa; Kinetoplastida; Trypanosomatidae; Leishmania.

Patent NO. 6858579

GENERAL INFORMATION:
APPLICANT: William Harvey Research Limited
TITLE OF INVENTION: Anti-inflammatory compounds
FILE REFERENCE: P019602WO
CURRENT APPLICATION NUMBER: US/09/759,484
CURRENT FILING DATE: 2001-01-12
NUMBER OF SEQ ID NOS: 8
SOFTMARE: PatentIn Ver. 2.1
SEQ ID NO 7
                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
